# EUROPEAN ARTICLE SYSTEM OF THE SHOE TRADE

## 1. Generally

In order to achieve a comprehensive structure in the incoming goods, stocks and sales, each branch has its own article number system. So as to process the characteristics of shoes, they are classified in a generally known classification system.

Within this decimal classification system each figure, i.e. each position of the article number, stands for a certain characteristic of the shoe.

**Please note, that you can only participate in electronic data processing, when you use the European Article System (EAS) as shown in the example below.**

## 2. Composure of the European Article System (EAS)

The European Article System of the shoe trade is composed as follows:

Description	Article group			Colour	Free space for user		
	Category	Shoe type	Additional identification				
Article description	men's	lace-up	plain sole	brown			
key code (EAS)	1	3	0	3			
explanation number	1	2	3	4			

Explanation below

### Article group (1-4)

The article group is stated in the first three positions of the article number. These positions have the following meaning:

#### 1. Category

The basis of the entire trading statistics are the classification of the categories.

The categories are distinguished as follows:

<b>0 free</b>	<b>3 toddler's shoes</b>	<b>6 bags/leather goods</b>
<b>1 men's shoes</b>	<b>4 children's shoes</b>	<b>7 sports wear</b>
<b>2 ladies' shoes</b>	<b>5 slippers</b>	<b>8 sports shoes</b>
		<b>9 sports equipment</b>

#### 2. Shoe type

As it is impossible to summarise all shoe types in the ten figures that are available within the decimal positions, each category can be classified up to ten different shoe types. Hereby the category index numbers have different contents.

#### 3. Additional identification

In many cases the category and the shoe type alone will not sufficiently specify the shoe, so a third position is used for additional identification of the shoe.

This figure specifies a further classification of the shoe type and adds even more value to the statistic data.

#### 4. Colour

The fourth position of the article number indicates the basic colour of the shoe. The numbers for the basic colours apply for all categories and shoe types. The individual codes indicates the following colours:

0 black*	4 beige*	8 blue
1 white*	5 red	9 other colours
2 grey	6 yellow	
3 brown*	7 green	
(*These colour must be used all times)		

Participants who wish to use other colours than mentioned above, can use the colour codes that are mentioned in the EDV catalogue (4th position).

Participants who do not wish to extend the number of colours use figure "9" for other colours.

# EINHEITSARTIKELSYSTEM DES SCHUHHANDELS

## 1. Allgemeines

Um eine klare Gliederung der Wareneingänge, Warenbestände und Umsätze zu erhalten, benötigt jede Betriebsstatistik ein Artikelnummern-System. Um die Merkmale des Schuhs statistisch erfassen zu können, werden sie in ein Dezimal-Klassifizierungssystem eingeordnet, wie es allgemein vom Kontenrahmen her bekannt ist. Im Dezimal-Klassifizierungssystem übernimmt jede Dezimalstelle – also jede Stelle der Artikelnummer – die Bedeutung eines bestimmten Merkmales des Schuhs.

**Bitte bedenken Sie, dass Sie ausschließlich und nur dann am elektronischen Datenaustausch teilnehmen können, wenn Sie das Einheitsartikelsystem (EAS) in der hier vorgeschlagenen Form anwenden.**

## 2. Aufbau des Einheitsartikelsystems (EAS)

Das Einheitsartikelsystem des Schuhhandels ist wie folgt aufgebaut:

Bezeichnung		Artikelgruppe			Farbe	Belegung durch den Anwender			
		Waren- gruppe	Schuh- gattung	Ergänzungs- merkmal					
Beispiel	Artikel- beschreibung	Herren	Schnür- halbschuh	glatte Sohle	braun				
	<b>Schlüssel lt. EAS</b>	<b>1</b>	<b>3</b>	<b>0</b>	<b>3</b>				
Textziffer für die Erläuterungen		<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>				

Beschreibung im folgenden Text

### Artikel-Gruppe (1-4)

Mit den ersten drei Stellen der Artikelnummer wird die Artikel-Gruppe festgelegt. Diese Stellen haben jeweils folgende Bedeutung:

#### 1. Warengruppe

Das Fundament der gesamten Betriebsstatistik ist die Warengruppen-Einteilung.

Die Warengruppen unterscheiden sich wie folgt:

<b>0 Frei</b>	<b>3 Kleinkinderschuhe bis Gr. 30</b>	<b>6 Lederwaren/Taschen</b>
<b>1 Herrenschuhe</b>	<b>4 Großkinderschuhe ab Gr. 27</b>	<b>7 Sport-Textilien</b>
<b>2 Damenschuhe</b>	<b>5 Hausschuhe</b>	<b>8 Sport-/Spezialschuhe</b>
		<b>9 Sport-Hartwaren</b>

#### 2. Schuhgattung

Da es nicht möglich ist, alle Schuhgattungen mit zehn Ziffern, die in einer Dezimalstelle höchstens zur Verfügung stehen, zu erfassen, können jeweils jeder Warengruppe bis zu zehn verschiedene Schuhgattungen zugeordnet werden. Hierbei haben die Kennziffern je nach Warengruppe unterschiedliche Inhalte.

#### 3. Ergänzungsmerkmal

Da in vielen Fällen die Warengruppe und Schuhgattung allein keine hinreichende Bestimmung des Schuhtyps gewährleistet, dient als 3. Stelle eine Ergänzungsziffer zur Klassifizierung der Nebenmerkmale des Schuhs. Die Ergänzungsziffer gliedert also die Schuhgattungen nach weiteren Merkmalen auf und schafft dadurch einen größeren Aussagewert der statistischen Auswertungen.

#### 4. Grundfarbe

Die 4. Stelle der Artikelnummer bezeichnet die Grundfarbe des Schuhs. Die Ziffern für die Grundfarben gelten für alle Warengruppen und Schuhgattungen unverändert. Die einzelnen Ziffern haben folgende Bedeutung:

<b>0 schwarz*</b>	<b>4 beige*</b>	<b>8 blau</b>
<b>1 weiß*</b>	<b>5 rot</b>	<b>9 sonstige Farben</b>
<b>2 grau</b>	<b>6 gelb</b>	
<b>3 braun*</b>	<b>7 grün</b>	

(\* Diese Farb-Kennziffern sollten in jedem Fall verwendet werden.)

Teilnehmer, die eine nach den oben genannten Grundfarben differenzierte Farbkennzeichnung wünschen, übernehmen die in den Katalogen in der EDV-Nummer (4. Stelle) vergebene Farbziffer. Teilnehmer, die sich auf wenige Farben beschränken wollen, können die im Katalog angegebene Farbziffer ignorieren, müssen dann aber die Farbziffer `9` einsetzen. Es ist nicht statthaft, beispielsweise an Stelle der vorgegebenen Farbziffer `3` die Farbziffer `5` zu verwenden.

# SYSTEME DE CLASSIFICATION

## 1. Généralités

De manière à obtenir une classification claire des entrées de marchandises, des articles en stock et des chiffres réalisés, toute statistique d'entreprise nécessite un système de classification par numéro d'article. Pour pouvoir enregistrer les particularités de la chaussure dans un système informatique, celles-ci sont classifiées dans un système décimal comme il est de coutume de le faire en général.

**Dans ce système de classification décimale chaque poste décimal (ce qui correspond à dire chaque poste de numéro d'article) correspond lui-même à une particularité de la chaussure.**

## 2. Structure du système de classification des article

Ce système se compose de:

Désignation		Famille d'articles			couleur	A remplir par l'utilisateur			
		Famille d'art	Forme chaus	particularité complément					
Exemple	Description de l'article	homme	chaussures lacets	semelle lisse	marron				
	Code inform	1	3	0	3				
Chiffre texte pour complément d'explication		1	2	3	4				

Descriptif dans le texte ci-dessous

### Famille d'article (1-4)

Ce numéro se compose des 3 premiers chiffres du numéro d'article, ces chiffres ont la signification suivante:

#### 1. Famille de produit

La base de toute statistique d'entreprise est la classification par famille de produit.

Les familles de produit se décomposent comme suit:

<b>0 libre</b>	<b>3 Chaussures Enfant jusqu'à pointure 30</b>	<b>6 Maroquinerie</b>
<b>1 Chaussures Homme</b>	<b>4 Chaussures Enfant à partir de pointure 27</b>	<b>7 Sport-Textile</b>
<b>2 Chaussures Femme</b>	<b>5 Pantoufles</b>	<b>8 Chaussures de sport</b>
		<b>9 Equipement sport</b>

#### 2. Type de chaussures

Etant donné qu'il n'est pas possible d'enregistrer tous les types de chaussures sur la base de 10 positions décimales qui sont à notre disposition, dans chaque famille de produit il est possible de classifier jusqu'à 10 types de chaussures par famille de produit, ce qui fait que selon les familles de produits, les chiffres n'ont pas les mêmes significations.

#### 3. Caractéristiques complémentaires

Etant donné qu'en de nombreux cas les familles de produit et types de produits seuls, ne permettent pas de donner suffisamment de détails sur le produit, il existe une 3<sup>ème</sup> position qui sert à classifier les renseignements complémentaires que l'on peut donner sur une chaussure.

Le chiffre complémentaire décompose le type de chaussure selon des caractéristiques complémentaires et peut ainsi élargir le champ de connaissances servant à repérer l'article.

#### 4. Couleurs basiques

Le 4<sup>ème</sup> chiffre du numéro d'article désigne la couleur de base de la chaussure, les chiffres des couleurs de bases restent les mêmes aussi bien pour les familles de produit que pour les types de chaussures.

Voici la correspondance de chaque chiffre:

0 noir	4 beige	8 bleu
1 blanc	5 rouge	9 autres coloris
2 gris	6 jaune	
3 marron	7 vert	

Les personnes souhaitant avoir une plus grande précision quant aux nuances des coloris se reporteront aux catalogues dans les coloris informatiques (numéros de 4 chiffres) .

Les personnes qui souhaitent se limiter à un petit nombre de couleurs peuvent ne pas se reporter aux chiffres indiquant la couleur dans le catalogue, mais doivent indiquer la rubrique « 9 » . Il ne doit pas se produire d'utiliser par exemple le chiffre 3 alors qu'il s'agirait du coloris 5.

# SISTEMA UNITARIO DEGLI ARTICOLI APPARTENENTI AL COMMERCIO CALZATURIERO

## 1. Generali

La statistica aziendale necessita di un sistema numerico di tutti gli articoli commercializzati, per garantire sia il continuo aggiornamento di tutti i movimenti nel magazzino che l'esatta gestione dell'entrata merce e del volume d'affari. Le relative caratteristiche di ogni singola calzatura vengono attribuite ad un sistema di classificazione decimale il quale consente la loro registrazione statistica. Ogni cifra decimale – appartenete al numero d'articolo - corrisponde ad una determinata caratteristica, particolarità della scarpa.

**Si ricorda che solo ed esclusivamente l'utilizzo unitario del sistema numerico degli articoli (EAS) – qui di seguito proposto - è in grado di consentire a tutti gli operatori, partecipanti il continuo scambio, flusso dei dati elettronici.**

## 2. Composizione/struttura del sistema unitario degli articoli (EAS)

Il sistema unitario degli articoli appartenenti al commercio calzaturiero è composto dai seguenti elementi:

Descrizione		Gruppo d'articolo			Colore	spazio libero			
		Gruppo	Famiglia/ Genere	Caratteristica Colore					
all'operatore	Descrizione Articolo	Uomo	scarpa con allacciatura/ francesina	suola liscia	marrone				
	<b>Codice appartenente al Sistema EAS</b>	<b>1</b>	<b>3</b>	<b>0</b>	<b>3</b>				
Cifra del testo per spiegazioni		1	2	3	4				

Descrizione qui di seguito

### Gruppo articolo (1-4)

Le prime tre cifre del numero d'articolo rappresentano il gruppo dell'articolo. Il loro significato è il seguente:

#### 1. Gruppo di merce

Il fondamento della statistica aziendale costituisce il raggruppamento, l'attribuzione della scarpa al relativo gruppo di merce. Si distinguono i seguenti gruppi di merce:

<b>0 libero</b>	<b>3 scarpe da bambino fino a misura 30</b>	<b>6 pelletteria/borse</b>
<b>1 scarpe da uomo</b>	<b>4 scarpe ragazzi da misura 27</b>	<b>7 abbigliamento sportivo</b>
<b>2 scarpe da donna</b>	<b>5 scarpe da casa</b>	<b>8 scarpe sportive/speciali</b>
		<b>9 attrezzature sportive/articoli vari</b>

#### 2. Famiglia/genere della scarpa

A ciascun gruppo di merce vengono attribuite al massimo dieci "famiglie" della scarpa dovuto al sistema decimale che consente non più di dieci cifre. Il contenuto delle cifre varia in base ai gruppi di merce.

#### 3. Caratteristica supplementare

In molti casi la sola attribuzione della scarpe al gruppo di merce ed alla "famiglia" non è sufficiente per classificare con precisione il tipo di calzatura. Si è rivelato utile indicare una terza cifra supplementare che codifica una particolarità secondaria della scarpa e che consente la classificazione più dettagliata e quindi la valutazione della statistica in modo più efficace.

#### 4. Colore di base

La quarta cifra appartenente al numero d'articolo riguarda il colore di base della scarpa. Le cifre che codificano i colori basilari valgono ugualmente per tutti i gruppi di merce e per tutte le "famiglie" della scarpa. Il loro significato è il seguente:

0 nero*	4 beige*	8 blu
1 bianco*	5 rosso	9 colori vari
2 grigio	6 giallo	
3 marrone*	7 verde	
(*Si consiglia di indicare sempre e comunque questo "codice colore".)		

Gli operatori che desiderano classificare in modo differenziato e dettagliato il colore secondo i colori di base sopra elencati, utilizzano il codice colore (la 4. cifra) indicato nel catalogo. Tutti coloro, invece, che si limitano ad elencare pochi colori possono ignorare il codice colore indicato nel catalogo, in tal caso sono però tenuti ad utilizzare il codice colore "9". Non è consentito utilizzare, ad esempio, il codice colore "5" al posto del codice colore "3".

# EENHEIDS ARTIKEL SYSTEEM VAN DE SCHOENDETAILHANDEL

## 1. Algemeen

Teneinde een duidelijke structuur te verkrijgen in de inkomende goederenstroom, voorraad en omzet, heeft iedere bedrijfskolom een artikelnummer systeem. Om de kenmerken van de schoenen statistisch te kunnen verwerken, worden deze in een decimalen classificatiesysteem ondergebracht, zoals dit in het algemeen bekend is. Binnen het decimalen classificatiesysteem neem ieder getal, i.c. iedere positie van het artikelnummer, de betekenis in van een bepaald kenmerk van de schoen.

**Bedenkt u zich, dat u uitsluitend en alleen dan aan elektronische gegevensverwerking kunt deelnemen, indien u het Eenheids Artikel Systeem (EAS) in de hier voorgestelde vorm toepast.**

## 2. Opbouw van het Eenheids Artikel Systeem (EAS)

Het Eenheids Artikel Systeem van de schoendetailhandel is als volgt opgebouwd:

Omschrijving	Artikelgroep			Kleur	Vrij voor de gebruiker			
	Goederengroep	Schoensoort	Aanvullend kenmerk					
Artikelomschrijving	heren	veterschoen	gladde zool	bruin				
Sleutel lt. EAS	1	3	0	3				
Tekstcijfer voor de verklaringen	1	2	3	4				

Beschrijving in de navolgende tekst

### Artikelgroep (1-4)

Met de eerste drie posities van het artikelnummer wordt de artikelgroep vastgelegd. Deze posities hebben telkens volgende betekenis:

#### 1. Goederengroep

De basis van de totale bedrijfsstatistiek is de indeling van de goederengroep.

De goederengroepen onderscheiden zich als volgt:

<b>0 vrij</b>	<b>3 kleine kinderschoenen</b>	<b>6 tassen/lederwaren</b>
<b>1 herenschoenen</b>	<b>4 grote kinderschoenen</b>	<b>7 sport textiel</b>
<b>2 damesschoenen</b>	<b>5 pantoffels</b>	<b>8 sport/speciaalschoenen</b>
		<b>9 sport hardwaren</b>

#### 2. Schoensoort

Aangezien het niet mogelijk is om alle schoensoorten met tien cijfers, die binnen de decimale posities beschikbaar zijn, samen te vatten, kan iedere goederengroep telkens tot aan tien verschillende schoensoorten onderverdeeld worden. Hierbij hebben de kengetallen per goederengroep verschillende inhoud.

#### 3. Aanvullend kenmerk

Aangezien in veel gevallen de goederengroep en het schoensoort alleen geen toereikende bepaling van het type schoen waarborgt, dient als derde positie een aanvullend cijfer voor de classificatie van het kenmerk van de schoen te worden gebruikt. Het aanvullende cijfer geeft hiermee een onderverdeling van het schoensoort naar verdere kenmerken en geeft hiermee een grotere waarde aan de statistische gegevens.

#### 4. Basiskleur

De vierde positie van het artikelnummer geeft de basiskleur van de schoen aan. De getallen voor de basiskleuren gelden ongewijzigd voor alle goederengroepen en schoensoorten. De individuele getallen hebben de volgende betekenis:

0 zwart*	4 beige*	8 blauw
1 wit*	5 rood	9 overige kleuren
2 grijs	6 geel	
3 bruin*	7 groen	

(\* Deze kleur-kengetallen dienen in ieder geval toegepast te worden.)

Deelnemers, die een afwijkende kleurbetekenis als boven wensen, kunnen het in de catalogi van de EDV-nummers (4e positie) gegeven kleurnummer overnemen. Deelnemers, die zich tot minder kleuren willen beperken, kunnen het in de catalogus vermelde kleurnummer negeren, doch moeten dan kleurnummer '9' gebruiken. Het is niet mogelijk, bijvoorbeeld op de plaats van het gebruikte kleurnummer '3' het kleurnummer '5' toe te passen.
